INTRODUCTION

In today's modern world of the 21st century, technology is advancing day by day and e-commerce is becoming very much popular among people of all ages. Online shopping has become an essential part of our daily life. Bangaliyana Bazar is an e-commerce website which is developed for selling products online. In this website users can see products, they can add products to cart and they can place order. The website is very user friendly and easy to use. It is made by using many modern technologies. The main purpose of this project is to make an online shop. This project was very helpful for us to learn many new things about web development, teamwork, and time management. We faced many problems while making this project but we solved them all by working hard. We hope that you will like our project and this presentation. In this presentation we will discuss about all the details of our project step by step.

OBJECTIVES OF THE PROJECT

- To develop an e-commerce website.
- To sell products online.
- To make the website user friendly.
- To make the website easy to use.
- To learn web development.
